Foreword

Films and Other Materials for Projection presents motion pictures, filmstrips, sets of transparencies, and slide sets currently cataloged by the Library of Congress, thus serving as an acquisition, reference, and research tool. Moreover, inclusion of the Library of Congress card number with each entry makes the catalog useful in ordering Library of Congress printed cards.

The Library of Congress attempts to catalog all motion pictures, filmstrips, sets of transparencies, and slide sets released in the United States or Canada which have educational or instructional value. Data needed for the catalog entries are supplied mainly by producers, manufacturers, film libraries, or distributing agencies. In most cases cataloging is done from the information thus provided, without actually viewing the material itself.

From 1951 through April 1957, cards were printed for virtually all of the motion pictures and filmstrips which were registered for copyright during that period. Since May 1957 cards have been printed only for those copyrighted films that have been added to the collections of the Library of Congress or for which data has been supplied by producing or distributing agencies.

For the convenience of users, the addresses of the distributors and releasers who are mentioned in this issue are included in a separate list.

Films and Other Materials for Projection appears in three quarterly issues (January-March, April-June, July-September), with annual and quinquennial cumulations.

The Library of Congress began issuing printed cards for motion pictures and filmstrips in September 1951. The cards printed in 1951 and 1952 were included in the issues of the *Library of Congress Author Catalog* during 1951 and 1952 and are represented in a special quinquennial cumulation of the *Library of Congress Author Catalog*, 1948-1952. The cards which represented films issued after January 1, 1945, were also included in the 1951 and 1952 issues of the *Library of Congress Subject Catalog* and in the quinquennial cumulation of the *Library of Congress Catalog—Books: Subjects*, 1950-1954.

The LC catalogs in book form were reorganized in 1953 and *Films* became a separate catalog that year. In 1954 the title was changed to *Motion Pictures and Filmstrips* to designate more precisely the kinds of material the catalog then embraced. From 1951 to 1972 the entries in this catalog were produced from printed Library of Congress catalog cards. In early 1972 the Library began to include film cataloging records in the MARC data base. Later in the year, sets of transparencies and slides were added to the materials cataloged and in 1973 the title of the bibliography was changed to its present form to reflect the expanded coverage.

Beginning in 1973 the entire catalog, including main and added entries, subject headings, and cross-references, has been photocomposed from machine-readable cataloging records. Arrangement of the entries also was accomplished by computer, using new rules that differ in several ways from

those used in other Library of Congress catalogs. The new arrangement is explained in a separate section following this foreword.

Subject Control A complete subject index is provided based on *Library of Congress Subject Headings* and its supplements. The principles employed in the construction and application of these headings are, in brief, the use of terms in common American usage and the application of the most specific heading to the material concerned.

References are provided from terms which are not used to those which are used (*see* references), and in the annual and quinquennial cumulation's references are made to subjects representing related matters or other aspects of the same matter (*see also* references).

Only enough information to identify each item is included in the subject index. After locating an item in the index, the reader should refer to the main entry, in the front of the catalog, for a full description of the material.

In order that each film may be included in the subject index, headings indicating the form of the work are assigned for materials of a dramatic, abstract, or creative nature that do not have a specific subject, for example, "Abstract films," "Moving-picture cartoons," or "Theatrical motion pictures."

Inquiries *Films and Other Materials for Projection* is a cooperative publication, made possible by the common interest of its subscribers and of the Library of Congress in the development of tools to aid the researcher and the general public. Questions and suggestions of an editorial nature should be addressed to the Library of Congress, Catalog Publication Division, Washington, D.C. 20540. Subscriptions to the catalog, orders for LC printed cards or for MARC tapes, and other business matters should be addressed to the Card Division, Library of Congress, Washington, D.C. 20541.

Elements of the Entries

Materials are entered under title, and each title is followed by a word or phrase in brackets describing the medium employed. Added entries are made for producers and distributors as well as for the authors and titles of published works upon which the material is based or with which it is correlated. References from alternative titles or distinctive subtitles are also included.

Some special *abbreviations* are used in the physical description of materials.

Immediately below the summary of the contents of the material are the *tracings* which show where this work will be found in other parts of a library catalog. Arabic numerals precede the subject (s) with which the material deals; roman numerals precede the added entries which give the names of persons and corporate entities connected with the work and show whether this item is a part of a larger series.

Library of Congress classification numbers have been assigned to motion pictures and filmstrips since August 1971 and to transparency sets and slide sets since January 1972. These numbers appear at the left margin of the card beneath the tracings, enclosed in brackets.

The number in the middle of the line beneath the tracings is the *Dewey decimal classification number*, included for libraries which classify materials by that system. Assignment of Dewey decimal numbers was temporarily discontinued in November 1963 and resumed in October 1967. Numbers are taken from the 10th abridged edition of the Dewey list.

The *Library of Congress card number* assigned to each card for identification, ordering, and stocking purposes appears at the right margin of the card beneath the tracings. This number consists of a two digit prefix followed by a serial number.

Before 1969 the card numbers for motion pictures and filmstrips consisted of the prefix Fi, followed by two digits of the year in which the card was first printed and a serial number. Cataloging copy supplied by agencies participating in the cooperative cataloging program was identified by the prefix Fi A. The prefix Fi E was used to identify cataloging copy prepared through 1963 by the U.S. Office of Education for United States government films for public educational use, and also appears on cards printed between 1963 and 1969 for government-produced films. These special card numbers will continue to appear on cards that were first printed before 1969.

Many organizations and institutions participate in the cataloging program by providing the Library of Congress with data about materials. The name of the *reporting organization or institution* appears in the lower left corner of the entry.

MARC

The acronym MARC is used by the Library of Congress to designate MACHine Readable Cataloging. Its appearance at the right corner of the card beneath the Library of Congress card number means that the entry is in the MARC data base.

Filing Arrangement of the Catalog

The entries in this catalog are arranged according to new rules that have been approved for all computer-generated bibliographic products of the Library of Congress. These rules have been used as the basis for a computer program called LIBSKED (Library Sort Key Edit) which processes records in the MARC format. Although the more complex filing situations seldom occur in a small catalog, all the rules are explained here in detail for the sake of completeness.

1. Entries are arranged word by word. A word consists of one or more letters or numerals set off by spaces or marks of significant punctuation such as a hyphen. Letters are arranged according to the order of the English alphabet. Modified letters (e.g., á, ö, ø), are treated like their plain equivalents (e.g., a, o).

2. Numbers expressed in digits precede letters and, with few exceptions, are arranged in order of increasing numerical value. Numbers expressed in words are filed alphabetically.

3. Signs and symbols (e.g., \$, %) are ignored in filing, and the succeeding letters or numerals are used as the basis of arrangement.

4. Words are filed in the form and order in which they are written, subject to the provisions of rules 5-8. The examples show the effect of this rule on names with separate prefixes, abbreviations including initials and acronyms, and hyphenated words.

As a consequence of this rule, it may be necessary to look under more than one form to find a desired item. For example, a title known only in its spoken form "Fourteen acres of kitchen" may be found at the beginning of the file because its written form is actually "14 acres of kitchen" (see rule 2 above). It is advisable, therefore, to check under alternative forms whenever they might have been used for an unlocated item.

5. Initial articles in the title main entry are ignored in filing.

Title added entries and author-title added entries are constructed without initial articles; for example, the added entry for the filmstrip subtitled "The Alimentary canal" is "Alimentary canal." This practice is not always applied to corporate names and subject headings. Therefore, owing to present limitations of the sorting technique for this catalog, the corporate added entry "L'Atelier du film" appears among the L's and the subject heading "The West" appears among the T's. It is expected that this deficiency will be corrected in later issues of this catalog.

6. Fields that begin with identical elements are grouped together. When the leading elements in a group represent different types of entities, the order or arrangement is as follows: a) person, b) place, c) thing, and d) title. This rule is not new and continues previous practice.

7. When the leading elements of two or more topical subject headings are identical but they are qualified in different ways, the headings are grouped in the following order: a) element alone, b) with a dash subdivision, c) with an inverted adjective, and d) with a parenthetical qualifier. Subarrangement within any group is by succeeding secondary elements.

8. In any subject heading, subordinate elements that follow a dash are grouped in the following order: a) period subdivisions, b) form and topical subdivisions, and c) geographical subdivisions. The first group is arranged chronologically; the other two groups alphabetically. These distinctions are maintained at every level of subject subdivision.

Auto mechanics: How to use a Sun distributor tester. (Filmstrip) Mt. San Jacinto College, 1970.

46 fr. color 35 mm. and phonotape: single-track, 1 reel (5 in.), 3 3/4 ips., 18 min.

Also issued with phonotape in cassette.

With worksheet.

CREDITS: Writer, John Schuster.

SUMMARY: Shows how to use a Sun distributor tester. Includes calibrating the dwell-meter, measuring the distributor resistance, and adjusting the dwell angle. Discusses point spring tension, cam lobe variation, dwell variation, and mechanical and vacuum spark advance. Explains how to test the condenser.

1. Automobiles—Ignition—Maintenance and repair. I. Mt. San Jacinto College. II. Title: How to use a sun distributor tester. (Filmstrip) [TL213] 72-736716
Mt. San Jacinto College 73

Auto mechanics: Ignition scope secondary waveform. (Filmstrip) Mt. San Jacinto College, 1971.

28 fr. color 35 mm. and phonotape: single-track, 1 reel (5 in.), 3 3/4 ips., 13 min.

Also issued with phonotape in cassette.

With worksheet.

CREDITS: Writer, John Schuster.

SUMMARY: Presents an oscilloscope secondary waveform, including the firing line, spark line, intermediate section, point close signal, dwell line, and point open signal.

1. Automobiles—Ignition—Testing. 2. Cathode ray oscillograph. I. Mt. San Jacinto College. II. Title: Ignition scope secondary waveform. (Filmstrip) [TL213] 629.2 72-736715

Bread. [Motion picture] King Screen Productions. Released by Holt, Rinehart and Winston, 1972.

9 min. sd. color. 16 mm.

With guide.

SUMMARY: A wordless, pulsating analogy between the mass production of bread and the giant metropolises fed by bakeries. Views of masses of people in the city are intercut with closeup shots of intricate and ever-moving machinery which mixes, kneads, rolls, and shapes bread and biscuits. The images move in and out of each other, faster and faster, accompanied by a combination of electronic music and a rhythmic jazz score, culminating in a roll-eating orgy and a final kaleidoscopic shot in which a man devouring a roll begins to look like a voracious machine.

Cell behavior in insect blood. [Motion picture] National Science Foundation. Made by Education Development Center. Released by Holt, Rinehart and Winston, 1972.

8 min. sd. color. 16 mm. (Developmental biology film program)

With teachers' guide.

CREDITS: Author, David Walters.

SUMMARY: Points out that one of the factors that affects the behavior of cultured insect blood cells is the adhesiveness of the cells to objects in their environment. Studies hemocytes as seen cultured on glass, with one another, with fat body cells, and with resin beads in order to show differing forces of adhesion.

Experiments on the chick embryo. Part 4: Influences on limb outgrowth and symmetry. [Motion picture] National Science Foundation. Made by Education Development Center. Released by Holt, Rinehart and Winston, 1972.

9 min si color 16 mm (Developmental biology film program)

With teachers' guide

CREDITS Author, John Saunders

SUMMARY Illustrates factors which affect limb formation in the embryo of a chick by depicting the removal of the apical ectodermal ridge at different stages. Shows how the reversal of wing bud apex produces an extra hand, and how the grafting of the zone of polarizing activity to the anterior edge of a wing bud causes an extra wing tip to form.
